SUMMARY

B.Tech Computer Science student (graduating May 2027) and Software Development Intern who builds user-facing web interfaces in React and TypeScript, along with the APIs and cloud deployment behind them. Shipped a responsive React and TypeScript conference website with tiered registration pricing, and React dashboards for an enterprise platform now running in production. Built an interactive desktop interface with drag-and-drop and opt-in gesture control. Works with automated testing, CI/CD, and clean component and API design, and wants to grow into frontend engineering on a product team.

PROFESSIONAL EXPERIENCE

Software Development Intern – HLL Management Academy, HLL Lifecare Limited, Thiruvananthapuram Jun 2026 – Dec 2026

- Designed, developed, tested, deployed, and maintain HMA IEMS, a role-based platform (41 REST endpoints, 7 roles) with React dashboards, replacing Excel-driven HR, payroll, and project tracking for HLL Lifecare Limited, a Government of India enterprise | Live: mcuphll.in
- Translated HR, payroll, and finance requirements into a documented architecture (21 ADRs) with JWT/RBAC and audit logs
- Built an AWS Bedrock AI assistant with tool-calling over staff and finance data and per-user usage quotas
- Automated releases with 5 GitHub Actions workflows (CI, Docker builds, EC2 deploy with health checks)
- Wrote unit tests, required PR review for every change, and diagnosed and fixed issues on the live production system

PROJECTS

SJ-BIESH 2027 Conference Website (React, TypeScript, Vite)

- Delivered a responsive React and TypeScript conference site with a redesigned landing page, brochure content, and tiered-pricing registration pages | Live: d17sxv5cmozu8n.cloudfront.net

HandOff – Secure P2P Desktop File Transfer (Tauri, Python, FastAPI)

- Built the desktop interface for LAN file transfer with drag-to-edge drop and mDNS device discovery
- Added an opt-in MediaPipe pinch-to-drag gesture mode with in-memory frame processing; secured transfers with TLS, a pinned server identity, and per-file SHA-256 checks
- Backed by 40 backend test files and 60+ documented architecture decisions

Sentinel URL – Threat Intelligence Platform (Static and Dynamic Analysis)

- Built a URL scanner pairing static checks (DNS, WHOIS, TLS, brand) with a Playwright sandbox that simulates user interaction and monitors network traffic
- Containerized with Docker and deployed on AWS EC2; GitHub Actions runs Ruff, pytest, and image publishing | Live: sentinelurl.site | GitHub

DNA Steganography Web Application

- Engineered a DNA-based data encoding system for secure information storage | Live: dnastego.joelz.site | GitHub

SKILLS

Frontend: JavaScript, TypeScript, React, HTML, CSS, Vite, Bootstrap, Chart.js
Backend: Python, FastAPI, Django, SQLModel, Pydantic, REST API Design, JWT/RBAC
Databases: Relational databases (PostgreSQL), Supabase
Testing & Quality: pytest, Playwright, Ruff, Unit Testing, Code Review, ADRs
Cloud & DevOps: AWS (EC2, S3, SES, Bedrock), Docker, Docker Compose, Nginx, GitHub Actions (CI/CD), Linux
Other: C, SQL, Git, GitHub, AI-Assisted Development (Claude Code)

EDUCATION

B.Tech in Computer Science Engineering 2023 – Expected May 2027
Mar Baselios Christian College of Engineering and Technology, Peermade
APJ Abdul Kalam Technological University (KTU)
CGPA: 8.07 | Minor: Electronics and Communication Engineering

CERTIFICATIONS & ADDITIONAL

Certifications: AWS Cloud Practitioner, Google IT Automation with Python, SRE (Coursera), TCM Security Linux Fundamentals
Languages: English (Proficient), Malayalam (Native), Hindi (Basic)
